

The Five Core Functions of Integrated Safety Management

- **Plan the work:** Define the tasks that are to be accomplished
- **Assess the Hazards:** Analyze and determine the hazards and risks to employees, the public and the environment
- **Control the Hazards:** Establish controls that are sufficient to reduce the risks to acceptable levels
- **Do the work:** Conduct the work in accordance with the plan and the controls
- **Feedback and Improvement:** Review the results of the work and identify any lessons learned
